Displacements

Analytical solution:

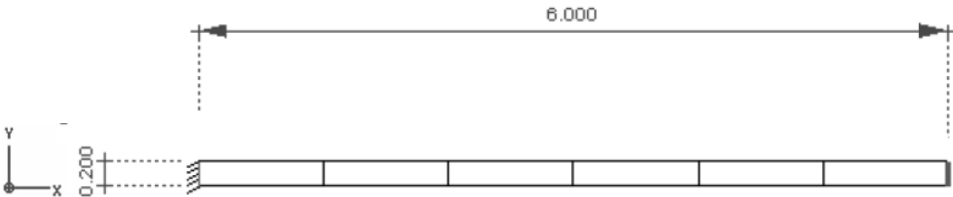

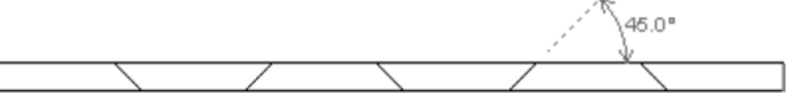

Node	x [m]	y [m]	e_z [m]	φ_x [rad]	φ_y [rad]
9	0,04	0,02	0,00140	0,0400	0,0500
10	0,18	0,03	0,01935	0,1200	0,1950
11	0,16	0,08	0,02240	0,1600	0,2000
12	0,08	0,08	0,00960	0,1200	0,1200

Results in AxisVM:

Calculated displacements and moments are the same in each mesh case as the results in AxisVM.

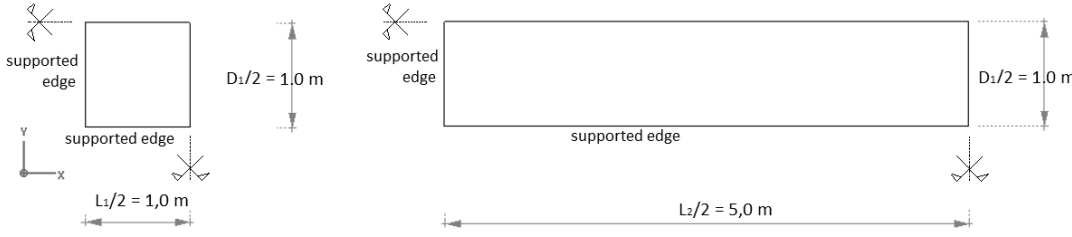

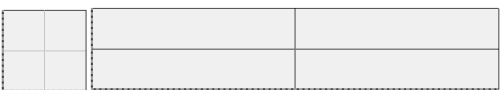

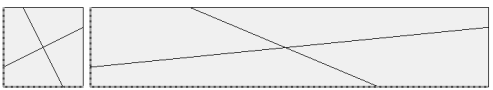

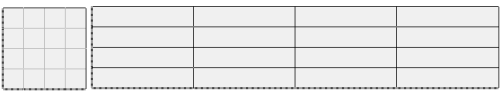

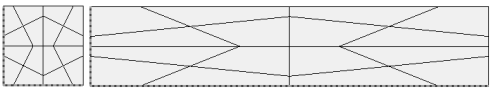

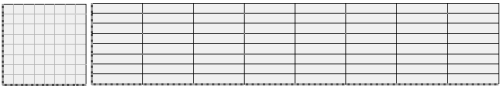

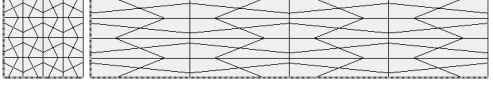

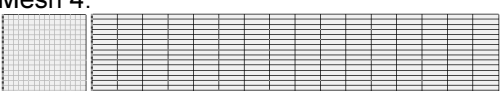

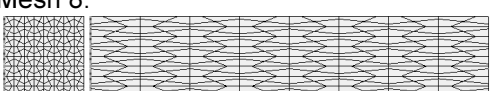

Software Release Number: R2b
 Date: 30. 03. 2016.
 Tested by: InterCAD
 Page number:
 File name: Cantilever.axs

Topic	In-plane and out-of-plane shear and bending patch test of shell element
Analysis Type	Linear static
Geometry	 <p style="text-align: center;">length: $h = 6,0$ m width: $w = 0,20$ m depth: $d = 0,10$ m</p>
Loads	Unit forces on the free end of the beam, each as a different load case: A unit force in y direction, distributed on the edge: 5 kN/m A unit force in z direction, distributed on the edge: 5 kN/m A unit moment about axis x
Boundary Conditions	Left edge is clamped: $e_x = e_y = e_z = \phi_x = \phi_y = \phi_z = 0$
Material Properties	$E = 1000$ kN / cm ² $\nu = 0,30$
Element types	Shell elements – 3 mesh cases: <p>mesh a.)  rectangular elements</p> <p>mesh b.)  parallelogram + trapezoidal elements</p> <p>mesh c.)  trapezoidal elements</p>
Target	Determine the displacements of the free end of the beam.
Results	Analytical solution: Reference: Richard H. MacNeal and Robert L. Harder, "A Proposed Standard Set of Problems to Test Finite Element Accuracy", Finite Elements in Analysis and Design 1, pp. 3-20, 1985. $e_y = 0,1081$ m $e_z = 0,4321$ m $\phi_x = 0,03411$ rad *

	Mesh case	AxisVM results	Analytical solution	e [%]
e_y [mm]	a	108,087	108,1	-0,01
	b	108,015		-0,08
	c	105,716		-2,21
e_z [mm]	a	428,189	432,1	-0,91
	b	428,743		-0,78
	c	427,531		-1,06
φ_x [rad]	a	0,03012	0,03411*	-11,7
	b	0,03006		-11,87
	c	0,03011		-11,73

* In our opinion, the φ_x rotation result for torsion is the following:

$$\varphi_x = \int \frac{M_x}{GI_x} dx = 0,03411 [\text{rad}]$$

Topic	Shell element test
Analysis Type	Linear static
Geometry	<p>The analyzed rectangular plates are of 2*2 and 2*10 meters. Only one quarter of the plates are modeled:</p>  <p style="text-align: center;">length: $L_1 = 2,0$ m, $L_2 = 10,0$ m width: $D_1 = D_2 = 2,0$ m depth: $t_1 = t_2 = 0,01$ m</p>
Loads	<p>Case 1: Distributed load on the whole plate: $0,1 \text{ kN/m}^2$ Case 2: Point load in z direction in the center of the plate: $0,4 \text{ kN}$ ($0,1 \text{ kN}$ on the modeled quarter plate)</p>
Boundary Conditions	<p>At the left and bottom edge of the modeled plate: Case 1: clamped edge: $e_x = e_y = e_z = \varphi_x = \varphi_y = \varphi_z = 0$ Case 2: simple support: $e_x = e_y = e_z = \varphi_z = 0$ In each case - because only one quarter of the original plate is modeled – symmetry conditions are applied to the symmetry lines.</p>
Material Properties	<p>$E = 1747,2 \text{ kN / cm}^2$ $\nu = 0,30$</p>
Element types	<p>Shell elements: arrangement of orthogonal and distorted elements, with different mesh density:</p> <div style="display: flex; flex-wrap: wrap;"> <div style="width: 50%;"> <p>Mesh 1.</p>  </div> <div style="width: 50%;"> <p>Mesh 5.</p>  </div> <div style="width: 50%;"> <p>Mesh 2.</p>  </div> <div style="width: 50%;"> <p>Mesh 6.</p>  </div> <div style="width: 50%;"> <p>Mesh 3.</p>  </div> <div style="width: 50%;"> <p>Mesh 7.</p>  </div> <div style="width: 50%;"> <p>Mesh 4.</p>  </div> <div style="width: 50%;"> <p>Mesh 8.</p>  </div> </div>

Target	Determine the deflection in z direction in the center of the plate.																																																																																																																													
Results	<p>Reference:</p> <p>Richard H. MacNeal and Robert L. Harder, "A Proposed Standard Set of Problems to Test Finite Element Accuracy", Finite Elements in Analysis and Design 1, pp. 3-20, 1985.</p> <table border="1"> <thead> <tr> <th rowspan="3">Analytic results</th> <th colspan="4">e_z deflection [mm]</th> </tr> <tr> <th colspan="2">Distributed load</th> <th colspan="2">Concentrated load</th> </tr> <tr> <th>b/a=1</th> <th>b/a=5</th> <th>b/a=1</th> <th>b/a=5</th> </tr> </thead> <tbody> <tr> <td>Clamped support</td> <td>1,26</td> <td>2,56</td> <td>5,60</td> <td>7,23</td> </tr> <tr> <td>Simple support</td> <td>4,06</td> <td>12,97</td> <td>11,60</td> <td>16,96</td> </tr> </tbody> </table> <p>Results in AxisVM</p> <table border="1"> <thead> <tr> <th colspan="2">Clamped support</th> <th colspan="4">e_z deflection [mm]</th> </tr> <tr> <th colspan="2"></th> <th colspan="2">Distributed load</th> <th colspan="2">Concentrated load</th> </tr> <tr> <th colspan="2"></th> <th>b/a=1</th> <th>b/a=5</th> <th>b/a=1</th> <th>b/a=5</th> </tr> </thead> <tbody> <tr> <td colspan="2">Analytic results</td> <td>1,26</td> <td>2,56</td> <td>5,60</td> <td>7,23</td> </tr> <tr> <td rowspan="4">Mesh cases</td> <td>1</td> <td>1,24</td> <td>2,62</td> <td>5,40</td> <td>6,31</td> </tr> <tr> <td>2</td> <td>1,26</td> <td>2,61</td> <td>5,57</td> <td>7,07</td> </tr> <tr> <td>3</td> <td>1,27</td> <td>2,60</td> <td>5,61</td> <td>7,10</td> </tr> <tr> <td>4</td> <td>1,27</td> <td>2,61</td> <td>5,62</td> <td>7,24</td> </tr> <tr> <td colspan="2">Error of last row</td> <td>0,8%</td> <td>1,9%</td> <td>0,4%</td> <td>0,1%</td> </tr> </tbody> </table> <table border="1"> <thead> <tr> <th colspan="2">Simple support</th> <th colspan="4">e_z deflection [mm]</th> </tr> <tr> <th colspan="2"></th> <th colspan="2">Distributed load</th> <th colspan="2">Concentrated load</th> </tr> <tr> <th colspan="2"></th> <th>b/a=1</th> <th>b/a=5</th> <th>b/a=1</th> <th>b/a=5</th> </tr> </thead> <tbody> <tr> <td colspan="2">Analytic results</td> <td>4,06</td> <td>12,97</td> <td>11,60</td> <td>16,96</td> </tr> <tr> <td rowspan="4">Mesh cases</td> <td>1</td> <td>4,17</td> <td>12,97</td> <td>16,78</td> <td>16,78</td> </tr> <tr> <td>2</td> <td>4,09</td> <td>12,30</td> <td>16,33</td> <td>16,33</td> </tr> <tr> <td>3</td> <td>4,08</td> <td>12,97</td> <td>16,88</td> <td>16,88</td> </tr> <tr> <td>4</td> <td>4,08</td> <td>12,97</td> <td>16,97</td> <td>16,97</td> </tr> <tr> <td colspan="2">Error of last row</td> <td>0,5%</td> <td>0%</td> <td>0,3%</td> <td>0,1%</td> </tr> </tbody> </table>	Analytic results	e_z deflection [mm]				Distributed load		Concentrated load		b/a=1	b/a=5	b/a=1	b/a=5	Clamped support	1,26	2,56	5,60	7,23	Simple support	4,06	12,97	11,60	16,96	Clamped support		e_z deflection [mm]						Distributed load		Concentrated load				b/a=1	b/a=5	b/a=1	b/a=5	Analytic results		1,26	2,56	5,60	7,23	Mesh cases	1	1,24	2,62	5,40	6,31	2	1,26	2,61	5,57	7,07	3	1,27	2,60	5,61	7,10	4	1,27	2,61	5,62	7,24	Error of last row		0,8%	1,9%	0,4%	0,1%	Simple support		e_z deflection [mm]						Distributed load		Concentrated load				b/a=1	b/a=5	b/a=1	b/a=5	Analytic results		4,06	12,97	11,60	16,96	Mesh cases	1	4,17	12,97	16,78	16,78	2	4,09	12,30	16,33	16,33	3	4,08	12,97	16,88	16,88	4	4,08	12,97	16,97	16,97	Error of last row		0,5%	0%	0,3%	0,1%
